### 👤 PROFILE

As a recent Computer Engineering graduate, I am focused on reinforcing my solid academic foundation in algorithms, software fundamentals, and data structures through practical, production-ready development. I am an adaptable team player with a solution-oriented mindset and a strong drive to learn. My primary objective is to advance my expertise in software development, backend systems, and data-driven applications by actively contributing to impactful projects in a professional environment.

### 🎓 EDUCATION

2021 – 2026  
Konya, Türkiye

**B.S in Computer Engineering**  
Konya Food and Agriculture University

**GPA**  
2.88

### 🧠 SKILLS

|             |           |        |           |
|-------------|-----------|--------|-----------|
| Java        | ● ● ● ● ● | Python | ● ● ● ● ● |
| PostgreSQL  | ● ● ● ● ● | Git    | ● ● ● ● ● |
| Spring Boot | ● ● ● ● ● | MySQL  | ● ● ● ● ● |

### 🌐 LANGUAGES

**English**  
B2

## PROFESSIONAL EXPERIENCE

07/2025 – 08/2025  
Ankara,Turkey

### **Tripy Mobility Teknoloji A.Ş**

Stajyer

During my internship, I played an active role in the backend development of an external ticket system project that the organization was re-creating. I worked on Java and Spring Boot-based web development, implemented RESTful APIs and CRUD operations, designed data models and relationship structures, worked on MySQL data structures, and analyzed the organization's active activities and intranet.

## PROJECTS

### **Campus Data**

<https://universiteatlas.vercel.app/universite>

Full-stack web application that helps Turkish university candidates filter and compare undergraduate programs and build personalized preference lists. Built a React 18 + TypeScript SPA (Vite, TanStack Query, Zustand, Tailwind) on top of a Spring Boot 3 / Java 17 REST API with JWT authentication, a Flyway-managed PostgreSQL schema and Redis caching; includes a Node.js pipeline that imports YÖK Atlas data via a snapshot/upsert flow and Leaflet-based campus map integration.

### **Ticket System**

A call center backend project developed with Spring Boot and MySQL, integrated into professional businesses. It provides comprehensive features such as notification system, messaging system, priority management, status tracking, etc.

### **Weather API- OpenWeatherMap Integration**

This project is a high-performance Spring Boot REST API solution that combines real-time weather data, Köppen climate classification, and detailed vegetation/biome information for all locations worldwide into a single platform. It can provide real-time data to all integrated sites using the API Key obtained via OpenWeatherMap.

### **E Commerce-Test-Automation-Framework**

Professional E-commerce Test Automation Framework built with Java, Selenium, and Cucumber. Features BDD approach, Page Object Model, and CI/CD integration with GitHub Actions.
